

GSS-SITE-2026-10

GPU Site Readiness

Planning checklist only. Follow current installation requirements for the exact OEM configuration and confirm the facility scope with responsible providers.

01 / Equipment

OEM model and system quantity

Installed configuration / rack scope

Installation document and revision

Operating dimensions and weight

Shipping dimensions / handling

Installation location

02 / Receiving and Access

Delivery window and receiving contact

Unloading responsibility / loading area

Door, lift and route clearances

Handling equipment / personnel

Floor loading approval

Rack, rails and mounting compatibility

Service clearance

Packaging / discrepancy process

GSS-SITE-2026-10 / CONTINUED

Power, Cooling and Handover

Confirm capacity and interfaces against OEM documentation. Assign ownership for every facility and installation requirement.

03 / Power and Cooling

Approved feeds and electrical capacity

PDU / connectors / distribution

Circuit and redundancy plan

Airflow / heat-removal requirements

Liquid-cooling equipment / provider

CDU included or supplied by facility

Coolant conditions / connections

Installation and inspection ownership

04 / Networks and Acceptance

Compute fabric and topology

Adapters / switches / port counts

Supported cables and optics

Storage and management networks

Firmware / software configuration record

Acceptance tests and responsible parties

Support and escalation owner

Open actions before deployment
